

Installation Crown support 5N

Datasheet, 07.06.2021, V1

 Engineered and made in Switzerland

Device used to apply a lateral force of 5N on the crown or push buttons of a watch during a "bathtub test" (immersion under 10cm of water).

Machine functions

- Setting the X and y position of the plungers
- Tappet calibration at 5N from factory.
- Clamping of the watch by knurled screw.
- Rubber mat to avoid scratches under the watch.
- Can be used in a Natator tank.

Technical specifications

Supporting force :	5N (According to NIHS standard)
Dimensions :	Ø70 x 64mm
Capacity :	1 watch head
Weight :	0.5 Kg
