

# RX 2 ON TANK OF 50 LITERS

## Air pressure multiplier on tank of 50 liters

Datasheet, 15.06.2021, V1

 Engineered and made in Switzerland

Used to multiply the pressure of the network. The tank is useful for applications with high air flow for a certain period of time.

### Machine functions

- Multiplies the air pressure by 2, maximum 16 bars (for the tank).
- Air tank of 50 liters under pressure.
- Easy to use, on wheels to facilitate movement.

### Technical specifications

|                              |  |
|------------------------------|--|
| Maximum inlet pressure :     | 10 bar                                     |
| Maximum outlet pressure :    | 16 bar (maximum 16 bar for the tank).      |
| Adjustable outlet pressure : | No (only the inlet pressure is adjustable) |
| Average flow at 5 bars :     | 230 liters / minute                        |
| Tank capacity :              | 50 liters                                  |
| Pressure rise, empty :       | < 8 minutes                                |
| Connector :                  | fast, hose Ø6mm                            |
| Temperature of use :         | + 2°C to + 40°C                            |
| Weight :                     | < 50 Kg                                    |
| Dimensions (l/d/h):          | 890 x 360 x 860 mm                         |
